A third class of threshold reaction that emits neutrons is ( $n, 2n$ ) in which the incident neutron ejects two neutrons from a nuclide. However, the threshold for this reaction is sufficiently high and the cross section small enough that generally it can be ignored in elementary treatments of reactor physics.

The nuclear fission reactions that underlie power reactors—that is, reactors built to produce electric power, propulsion for ships, or other forms of energy use—convert measurable amounts of mass to energy. Thus an appropriate place to begin a study of the physics of nuclear power is with the underlying nuclear reactions.
