When a conventional power plant is viewed as a whole, fuel and air enter the power plant and products of combustion leave the unit. There is also a transfer of heat to the cooling water, and work is done in the form of electrical energy leaving the power plant. The following are the inputs and outputs to the power plant.

Initially, the refrigerant enters the compressor as a low-pressure vapor, which is at or above the temperature inside the refrigerator. The vapor is then compressed to a high-pressure, high-temperature vapor. This vapor now passes through the condenser, a series of winding tubes which are exposed to the air (usually on the backs of refrigerators).
